CBS Urban Data Centre

Smart City

Data driven, evidence based, open data, big data

Smarter use of data

Beter understanding

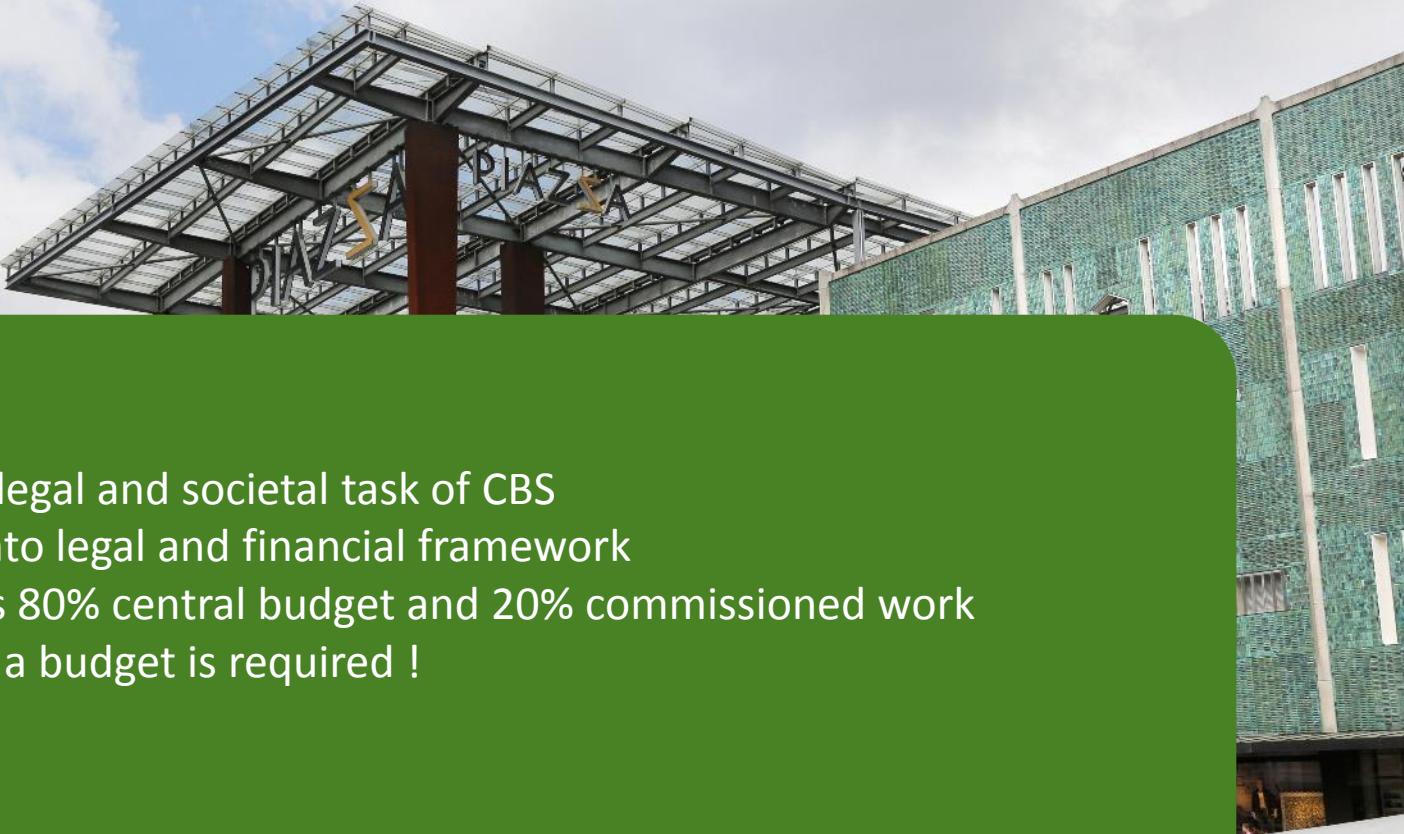

Better decisions

Beter & more efficiënt use of tax payers money

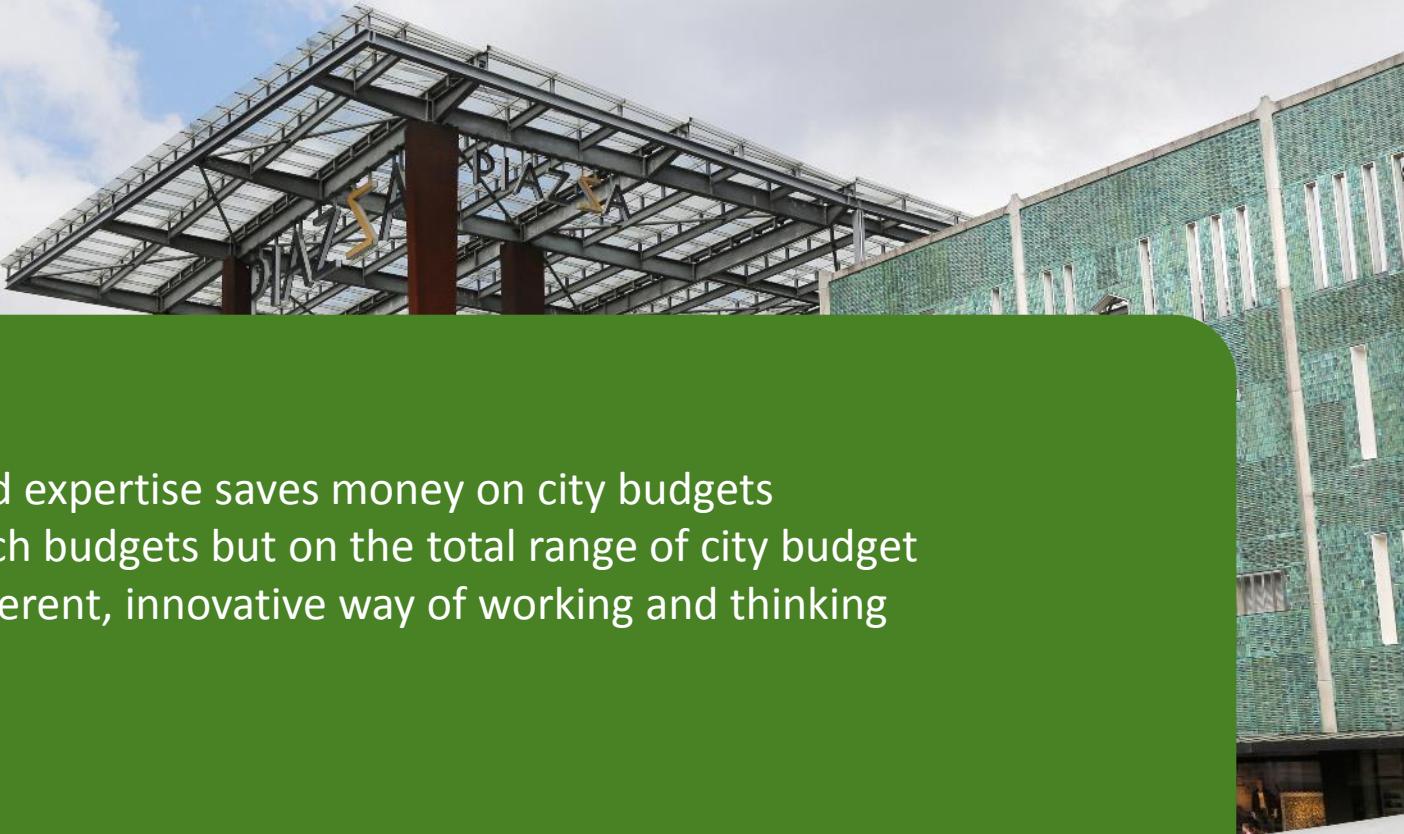

- CBS Urban Data Centre (UDC) = collaboration CBS-city or cluster of cities
- Using CBS data and expertise
- Better data & smarter use of data (smart city)
- Leads to better understanding, better decisions and better city finances !!

- Business case

- UDC is part of the legal and societal task of CBS
- UDC needs to fit into legal and financial framework
- The work of CBS is 80% central budget and 20% commissioned work
- For UDC therefore a budget is required !

- Business case...

- Using CBS data and expertise saves money on city budgets
- Not just on research budgets but on the total range of city budget
- This requires a different, innovative way of working and thinking

Urban Data Center

The need for Stats SA – Cities Collaboration

- Inclusive economic growth is the oxygen of democracy – Cities are the engines!
- SDGs require reporting on cities through Stats SA;
- Cities are also subscribing to international standards such as ISO 37120
- Reporting reforms need outcomes data from statistical system, admin data from cities
- Administrative data is critical to understand cities
- Cities are users, producers and integrators of data

Implementing the UDC concept in South Africa

Fighting poverty

City of The Hague spends €70 million on fighting poverty

In 2017 the City of The Hague spends € 68,8 million on fighting poverty, almost € 5 million more compared to 2016. Equal chances for children, participation of senior citizens, combatting debts and fighting poverty are the pillars under the 2017 city-policy

Poverty-trap.

The Hague offers financial support to citizens that are trapped in poverty. Also the **working poor** could benefit from this financial support but the city does not have any information on this group of citizens. Through the collaboration with CBS the city gets a better understanding of this group and will be able to support them better and prevent them from entering into the poverty-trap. This is good for poor people, for society and it creates financial savings in the budget of the city.

Example: fighting poverty in the City of The Hague

Fighting poverty Datacamp !

Smarter data create the input for a better “poverty fighting policy’ This leads to a genuine data driven city government

The ultimate goals is to reduce the number of poor people and to save substantial city budget expenditure in the Social Domain.

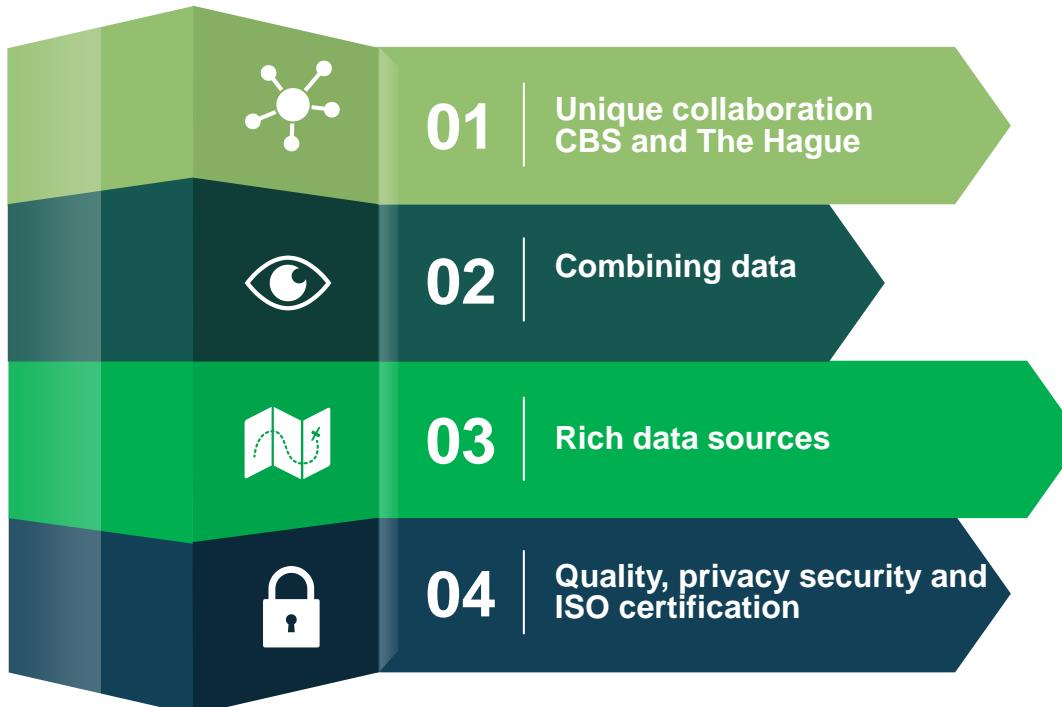

Fighting poverty in the City of The Hague

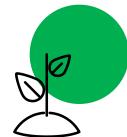

Why does the City of The Hague want to collaborate with Statistics Netherlands in creating a joint Urban Data Centre?

4 Advantages of an URBAN DATA CENTRE

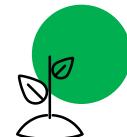

- 
- 01** | Unique collaboration
CBS and The Hague
 - 02** | Combining data
 - 03** | Rich data sources
 - 04** | Quality, privacy security and
ISO certification
