

An illustration on a grey background showing a utility worker in the center, wearing a purple shirt and overalls. To the left is a dark blue electrical meter with a red needle. To the right is a purple calendar with a red 'X' on one of the dates. Below the worker is a circular gauge with a star symbol and three small circles, connected to a pipe. The text below the illustration reads: "The management of offshore island utilities such as water, diesel and taking of electrical & water meter readings used to be a very manual process."

The management of offshore island utilities such as water, diesel and taking of electrical & water meter readings used to be a very manual process.

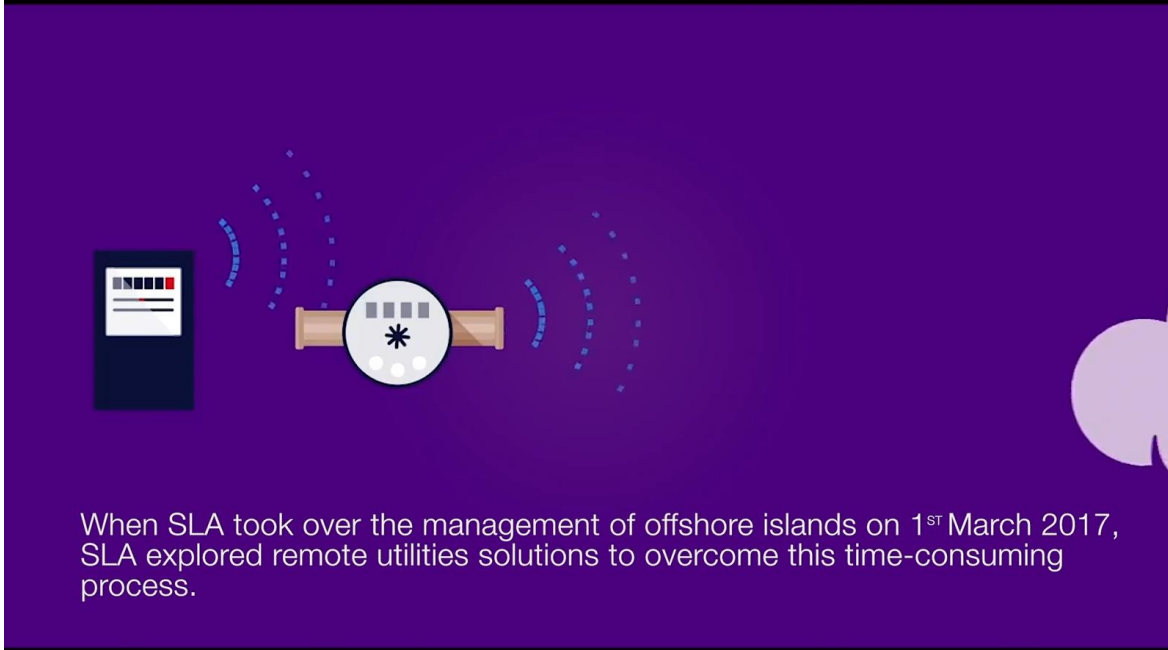

Officers will also have to trek to the various water & diesel tanks to visually read off level indicators in order to monitor the remaining water & diesel levels.

An illustration of a white rectangular tank with a dark blue top section. A white wavy line indicates the liquid level inside the tank, which is approximately two-thirds full. The tank is set against a dark blue background.

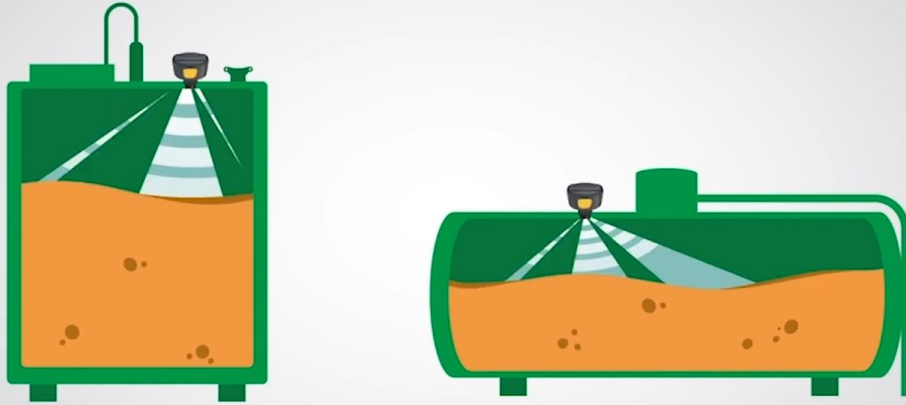

Officers will also have to trek to the various water & diesel tanks to visually read off level indicators in order to monitor the remaining water & diesel levels.

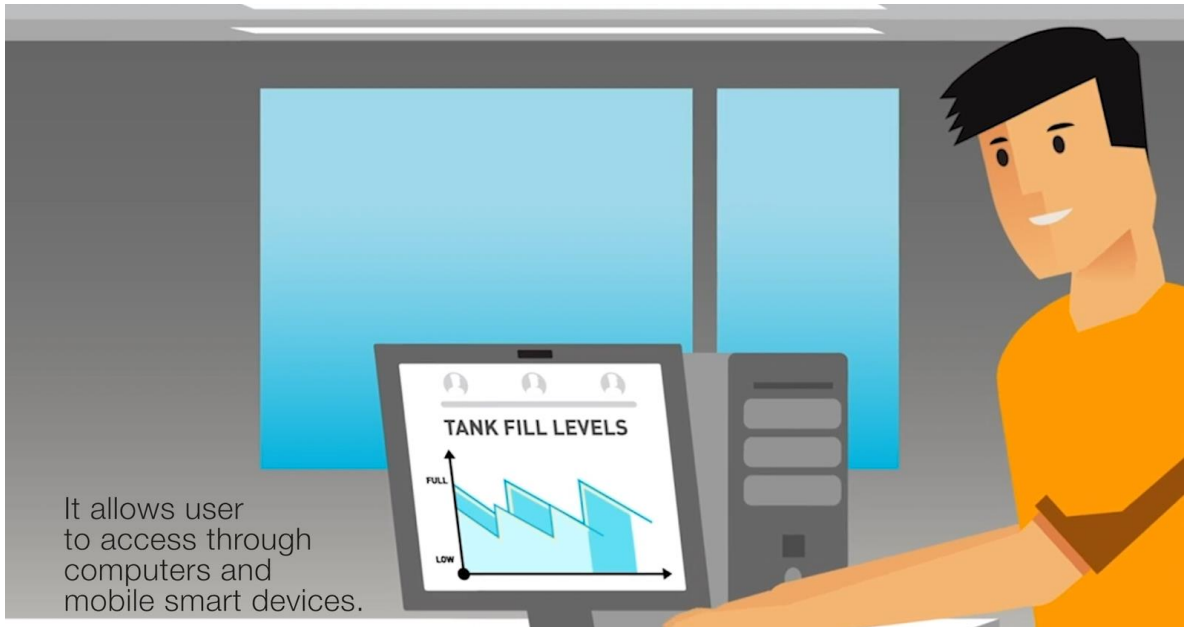

However, this tedious process is too time consuming, labour-intensive and prone to human-error.

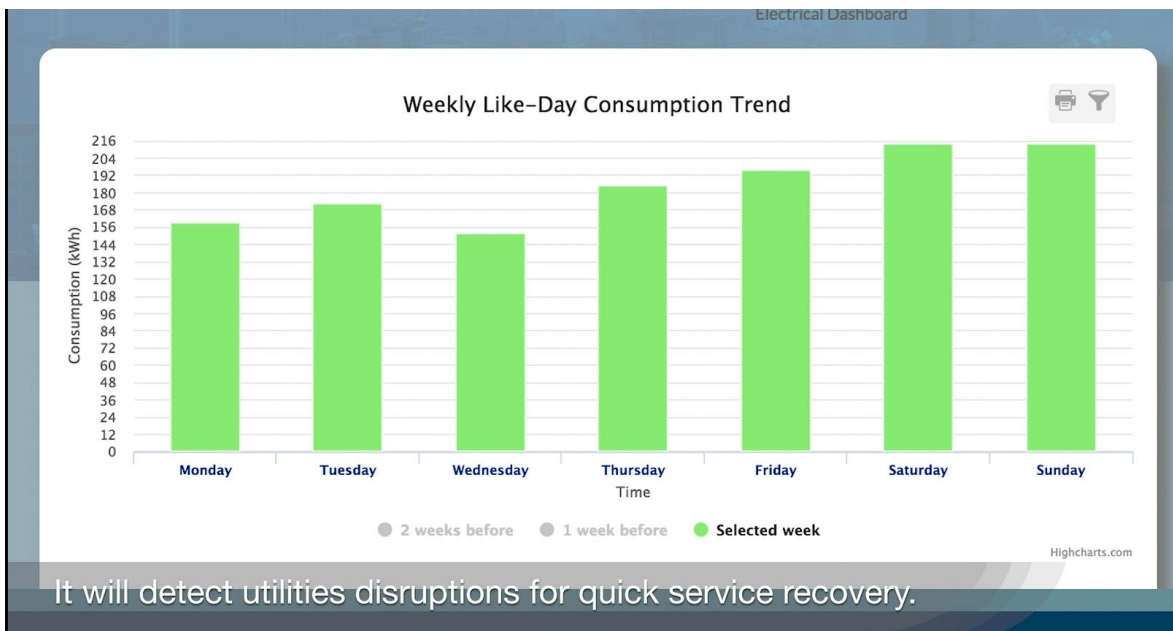

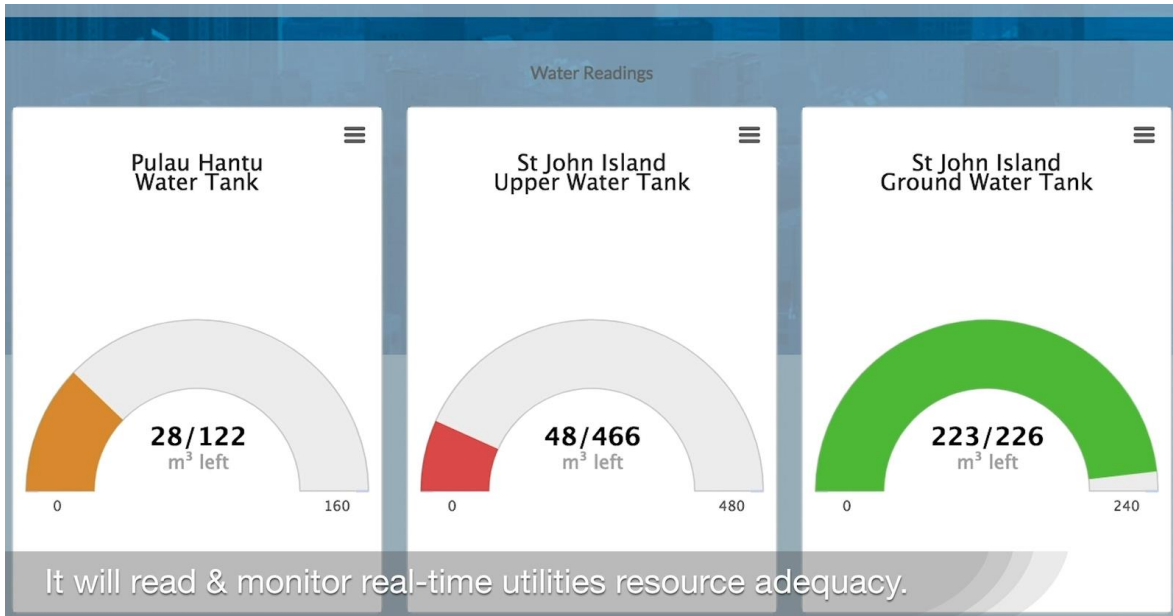

When SLA took over the management of offshore islands on 1<sup>st</sup> March 2017, SLA explored remote utilities solutions to overcome this time-consuming process.

It uses IoT sensors to remotely track water and diesel tank levels.

It allows user to access through computers and mobile smart devices.
