Proactive Assignment of Social Benefits in Azerbaijan

Key Characteristics:

Digital Innovation
Integrates digital technology for administrative efficiency

Proactive Enrollment
Automatically identifies and enrolls eligible individuals

Adaptive System
Evolves based on continuous data analysis
Continuous progress
Uses feedback for system refinement

Efficient Coverage
Ensures fast, comprehensive service to all eligible persons

Proactive Assignment

is a streamlined system that uses data from state agencies to automatically identify and enroll individuals for social benefits.
It eliminates the need for people to apply, ensuring efficient delivery of services to eligible recipients, particularly those who might otherwise miss out due to lack of access or awareness. This approach enhances inclusivity and operational efficiency in service provision.

As of December 2023, 49 out of 51 types of social allowances and stipends are proactively assigned to citizens.
